Why is this important?

Children’s Trust of South Carolina produces the child well-being profiles for each county in South Carolina. They provide us with a snapshot into the status of children and families in the state.

When children thrive, they meet educational milestones, live in economically stable homes and in supportive communities, and they are more likely to grow into productive, contributing members of our state.

However, as the profiles show, too many children live in environments that may put them at risk for negative outcomes, including child abuse and neglect. This data is available in the [Hampton County child maltreatment data profile](#).

How to use them?

These child well-being profiles can be used in a wide variety of ways to raise awareness of these statistics in your workplace, organization and community; support community conversations and data-driven decisions; and to strengthen grant writing, policy and presentations.

Where does this data come from?

This work, done in partnership with the Annie E. Casey Foundation (AECF), is modeled after the AECF’s KIDS COUNT state and national profiles.

When county-level data are available, the profiles use the same indicators as KIDS COUNT. When county-level data are not available, the profiles use proxies for the KIDS COUNT indicators.

Questions?

Children’s Trust regularly dedicates time and energy to helping agencies understand data and collaborate with their communities to make meaningful decisions. If you would like to host a conversation about the policy implications of this profile in your community, please contact Sarah Knox at sknox@scchildren.org.

For any questions about data, methodology or other data inquires, please contact research@scchildren.org.
